

Quality Fit Guarantee – Perfect Fit Every Time
 Process to assure a Perfect Fit Every Time you install a Quality Fit product.

Full line of quality wheel hub assemblies with durability and reliability built in

Gen 3.0 from Worldparts

- ▶ Integrating the outboard inner raceway with hub shaft results in a more accurately operating bearing with a more controlled installed preload than the separate inner raceway that is characteristic of Gen 2.5.
- ▶ Improved impact/shock load resistance due to an induction-hardened outboard inner raceway instead of the Gen 2.5 hardened inner raceway.
- ▶ Multi-lip outboard seal provides improved sealing with mounting flange, resulting in improved water and contaminant exclusion, and longer service life over Gen 2.5.

One Family of Products providing complete coverage:	
▶ Gen 0	Two separate bearings; maintenance is required with line assembly of the hub, spindle and other components affecting preload and product life
▶ Gen 1	One cartridge bearing; no maintenance required with line assembly of the hub, spindle and other components affecting preload and product life
▶ Gen 2	Bearing with one flange; no maintenance required; limited line assembly that affects preload and product life
▶ Gen 3	Bearing with integral flanges; bolt-on one-piece assembly that requires no maintenance; preload and product life are not affected by the assembly

WORLDPARTS®

Parts That Fit Your World

Wheel Hub Assembly

Parts That Fit Your World

Manufactured to ISO TS16949 standards.

Wheel Hub Assembly

Durability

High quality triple lip seals that provide extra resistance to external pollutants such as water, dust and mud to contain lubricant within the bearing.

Wheel hub assemblies engineered for the long haul

Worldparts wheel hub assemblies offer you quality, competitive pricing and full-line coverage of cars and light trucks for both Import & Domestic applications

The Worldparts line of Hub Assemblies offers excellent durability and long life with high quality triple lip seals that provide extra resistance to external pollutants such as water, dust and mud, while containing lubricant with the bearing.

- ▶ Wheel bolts included where applicable that meet or exceed ASTM/SAE standards
- ▶ ABS sensor wires included where applicable

Parts That Fit Your World

Precision Engineered

Precision matched bearings and cages designed to improve load distribution.

Premium Metallurgy

Advanced metal heat treatment process to reduce friction co-efficiency.

Ready to Install

Install ready featuring all accessories needed for ease of professional and safe installation.

Durability

High quality triple lip seals that provide extra resistance to external pollutants such as water, dust and mud to contain lubricant within the bearing.

Precision Makes

Designed with original specifications to match the need of every vehicle's requirements.

Quality Fit

Process to assure a Perfect Fit Every Time you install a Quality Fit product.
