New Water Pump

Precision Design

Computerized machined surfaces for proper fit and sealing.

Pre-assembled Water Pumps and Housings

Worldparts offers more water pumps with back housings than any other aftermarket manufacturer. Inclusion of the back housing allows the technician to replace the entire assembly with one unit – and order one part number for the complete replacement. Water pumps with back housings also reduce installation time and ensure trouble-free operation with reduced warranty claims and comebacks.

Additional benefits

- ▶ New pumps manufactured to ISO TS16949 standards
- ▶ 100% fully tested unitized bearings/seals
- ▶ Computerized machined surfaces for proper fit/sealing
- ▶ 100% inline quality tested

Parts That Fit Your World

Water Pump Coverage For More Than 97% of Today's Hybrid Vehicles

Worldparts covers the market for hybrid-vehicle water pumps with the most complete coverage from one aftermarket source. Proven-quality, precision-built Worldparts water pumps deliver OE exact fit and function, and include back housings for appropriate applications. Our coverage includes nearly every hybrid car and light truck in operation.
